About Me

A strong believer in the ability of the architecture to be a responsive entity contributing to the society rather than being a static object and have a positive effect on the world. Throughout my academic career, I have discovered a philosophy that entails design as an interdisciplinary, collective effort to respond to contemporary needs and future issues. I believe great design is the result of collaborative work combined with passionate, innovative, sensitive values that transforms a place or object into a unique solution that responds to human needs.
